An **AI Auditor** independently assesses whether AI systems are fair, transparent, safe, and compliant — bringing the rigor of internal audit to algorithms and models. It's one of the most in-demand emerging assurance roles.

WHAT THE ROLE DOES

- Audits AI/ML systems for bias, transparency, and control effectiveness
- Tests against the **NIST AI RMF**, **ISO/IEC 42001**, and the [EU AI Act](#)
- Validates model documentation, data lineage, and governance
- Reports findings to audit committees and regulators

FOUNDATIONS

Internal audit methodology plus AI literacy: how models can fail, drift, or discriminate, and how to evidence that they don't.

CERTIFICATIONS

CISA is the audit gold standard; ISACA's **AAIA** (Advanced in AI Audit) is purpose-built for this role; add IAPP **AIGP** for governance depth. Full credential details and salary data are in the [GRC Certifications Guide](#).

THE PATH

1. **Learn audit fundamentals** — controls, evidence, reporting.
2. **Add AI literacy** — model risk, bias testing, the NIST AI RMF.
3. **Certify** — CISA, then AAIA / AIGP.
4. **Practice** — audit a sample model end to end.

Step — Apply
