

EXECUTIVE BRIEF

What Is an AI Governance Committee? Roles, Membership, and How It Works

An AI governance committee gives an organization a clear place to make difficult decisions about artificial intelligence. The best committees do not slow every project or approve every tool. They establish the rules, assign accountability, review the uses that carry the greatest risk, and make sure someone has the authority to act when AI goes wrong.

EXECUTIVE SUMMARY

An AI governance committee gives an organization a clear place to make difficult decisions about artificial intelligence. The best committees do not slow every project or approve every tool. They establish the rules, assign accountability, review the uses that carry the greatest risk, and make sure someone has the authority to act when AI goes wrong.

KEY TAKEAWAYS

- An AI governance committee is a cross-functional decision and escalation body, not a substitute for day-to-day ownership.
- Its central job is to decide who may accept which AI risks, under what conditions, and with what evidence.
- Core members usually represent business leadership, legal, compliance, risk, privacy, security, data, and technology.
- Not every AI use needs committee approval. Risk tiers and delegated authority keep routine decisions moving.
- A useful committee produces decisions, owners, deadlines, and records. A committee that only discusses risk is not governing it.
